Exercise 5

Prove the following:

- a. A relation R is reflexive iff R^{-1} is reflexive (where R^{-1} is the inverse relation that just reverses the order).

→

Assume R is reflexive.

Let $(a, a) \in R$

Then $(a, a) \in R^{-1}$

Hence, R^{-1} is reflexive.

←

Assume R^{-1} is reflexive.

Let $(a, a) \in R^{-1}$

Then $(a, a) \in R$

Hence, R is reflexive.

- b. A relation R is symmetric iff $R = R^{-1}$.

→

Assume R is symmetric.

Let $(a, b) \in R$.

Want to show: $(a, b) \in R^{-1}$.

Notice: $(b, a) \in R$.

Thus, $(a, b) \in R^{-1}$.

Hence, $R = R^{-1}$.

←

Assume $R = R^{-1}$.

Let $(a, b) \in R$.

Then $(a, b) \in R^{-1}$.

$(a, b) \in R \Rightarrow (b, a) \in R^{-1}$.

But since $R^{-1} = R$, $(b, a) \in R$.

So, $(a, b) \in R \Rightarrow (b, a) \in R$.

Hence, R is symmetric..

- c. A relation R is anti-symmetric iff $R \cap R^{-1} \subset \Delta : \Delta = \{(a, a) : a \in A\}$

→

Assume R is anti-symmetric.

Then $(a, b), (b, a) \in R \Rightarrow a = b$.

So, $R \cap R^{-1}$ will only contain tuples such that $a = b$.

←

Assume $R \cap R^{-1} \subset \Delta : \Delta = \{(a, a) : a \in A\}$.

Let $(a, b) \in R$. If $a \neq b$, then $(a, b) \notin R \cap R^{-1}$. Thus, $(a, b) \notin R^{-1}$.

Hence, R is anti-symmetric.
